

MAILRISK

Always help with suspicious emails

✔ Offer help with just one click

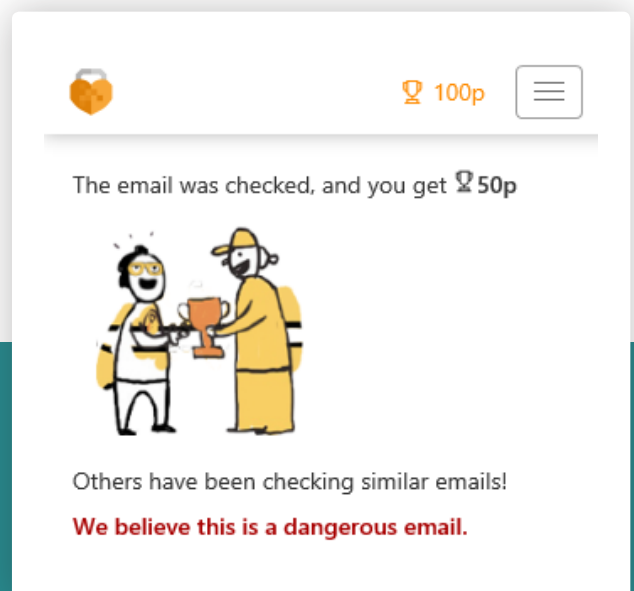

Users can always get help with suspicious emails. MailRisk taps into people's regular email workflow, and uniquely integrates security training for high impact learning.

✔ Build positive security culture

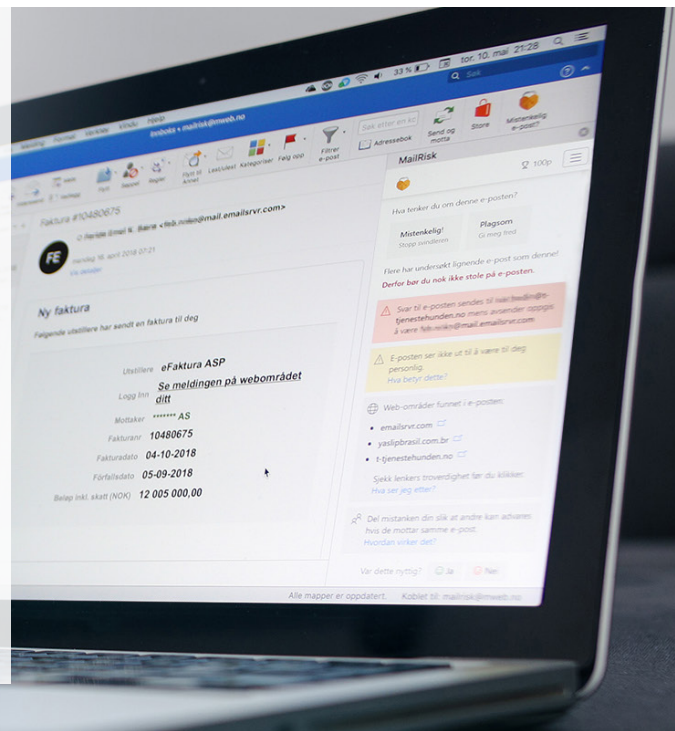

Inspire your colleagues to help each other with suspicious emails. MailRisk uses gamification for enjoyable, measurable and scalable security awareness, all year round.

✔ Automate email security checks

Combine human and artificial intelligence for unique automation. MailRisk becomes an extra member of your security team, offering analysis, feedback and data APIs.

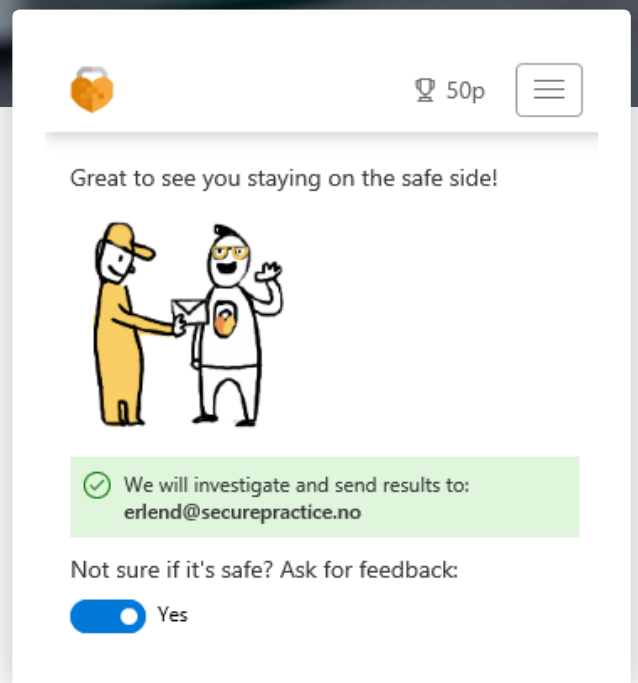

- ✓ Unique crowdsourced threat data
- ✓ Cloud based AI and analysis portal
- ✓ Managed email analysis available
- ✓ Phishing simulator included
- ✓ Simple install, get started in minutes
- ✓ EU-based and GDPR compliant
- ✓ Multi-platform (including mobile)

Feedback is always guaranteed

The MailRisk-button for Outlook provides an instant analysis of suspicious emails.

If we cannot immediately offer the user a satisfying response, it is simple to ask for a manual email check-up from an expert.

Super nice to get this instant feedback!

Easy way of reporting and quick response.

I LOVE MAILRISK!
Brilliant function – fantastic :)

People are your last line of defence.

We turn them into security champions.
